ECONOMIC CONDITIONS IN JANUARY

A useful summary of the economy's performance during 1946 is provided by the preliminary estimates of gross national expenditure and gross national product. In comparison with 1945 these totals declined slightly from \$11.5 to \$11.1 billion and net national income fell by a similar amount from \$9.6 to \$9.2 billion. Though the change in these totals was small, sharp shifts occurred in some of the individual components. On the expenditure side of the national accounts a reduction of \$1.8 billion in government expenditure was offset in large part by increases in consumers' expenditure and by advances in private investment in plant, equipment, residential housing and in-On the income side the ventories. change-over from a wartime to a peacetime economy was reflected in a reduction in pay and allowances to military personnel of \$.8 billion, a reduction that was partially offset by increased earnings of individual enterprise (including agriculture) and by higher salary and wage income to civilian employees.

92-93 94-95 One important total, personal income payments, showed an increase of \$.4 billion over its 1945 level to reach an all-time high of \$9.2 billion. This increase was primarily due to a \$.6 billion rise in transfer payments of which the most important were government payment of war service gratuities, re-establishment credits and pensions. The rise in family allowance payments which had been paid only during onehalf of 1945 was another contributing factor. These large additions to the spendable income of veterans helped bolster income payments at a time when military pay was falling off and reconversion unemployment was causing some drop in industrial payrolls. In doing so they contributed substantially to the rise in consumer expenditures and to the advance in retail prices.

A substantial part of these payments has been financed out of current taxation, for the Dominion Government has been showing a surplus of ordinary revenue over current expenditures during the present fiscal year. Even in respect to this part the transfer of funds from taxpayers to the recipients of war service gratuities or family allowances may have had some stimulating effect on expenditures if the persons receiving these payments spent them more freely than they would have been spent by persons receiving them in the form of tax reductions.

During 1947 these transfer payments will decline substantially from the level reached in 1946 but this need not have a deflationary effect. On a monthly basis a decline in the payments to veterans has been in progress for some time and is being offset by the recent increase in the level of industrial payrolls and by the reduction in income tax rates which went into effect at the beginning of the year. At December 1st aggregate weekly payrolls for eight industries were 14 per cent higher than at the same date a year ago and 12 per cent above their average level for 1946. There is no evidence to date that the current decline in transfer payments is having any dampening effect on personal expenditures. Retail sales for December were still strong though wholesale sales showed a rather sharp seasonal decline during November and December.

Total consumer expenditures in 1946 were about 8 per cent higher than in 1945, a somewhat smaller gain than the 14 per cent increase registered by the general retail sales index. Explanation of the difference lies in the fact that one component of the total, allowances for expenditure on food and clothing by the armed forces showed a decline and expenditure on services which are not included in the sales

index showed smaller increases. Expenditures on durable consumer goods showed sharp increases in 1946 and, with the exception of automobiles, consumers spent as large a part of their income (after tax) on these items as they did in pre-war years. Sales of passenger cars should show a further substantial gain in 1947, but with the level of sales still limited by the volume of production, this increase, together with further gains in expenditures on other durables, may cause a further decline in the amount of saving and an increased use of instalment credit. If consumers should offer serious resistance to higher prices by deferring their expenditures in anticipation of price declines, it might slow up sales but, as yet, there is little evidence of this.

In addition to the increase in consumers' expenditure the advance in private investment expenditures and the maintenance of a high level of exports were important factors in offsetting the decline in government expenditures. Exports have been supported during the current year by the Dominion Government's program of loans to the United Kingdom and other countries, and while these loans will continue to sustain exports through at least part of 1947, they are only a temporary aid and cannot be depended on over a longer period. If exports are to continue at this higher level without the aid of loans it will require a further increase in imports to provide the funds necessary to finance them. Restoration of production in Europe and United Kingdom might in time provide the goods needed to make our export trade self-supporting but to absorb this increased supply of imported goods into the Canadian economy would require an increase in consumers' expenditures or in private investment expenditures or in both. Though it is not unreasonable to expect some further expansion in both these items there is some danger that this transition might initiate a decline in production. This will depend on how quickly the loan funds are used up and how much strength exists in other forms of expenditure. Up to the end of January, 1947 advances to the countries that have been granted loans amounted to \$850 million, slightly over 40 per cent of the total amount authorized. though these advances may be in excess of actual expenditures they provide some indication of the rate at which the loans are being utilized. Investment expenditures in the form of residential and business construction. new factories and equipment advanced from \$.8 billion in 1945 to \$1.1 billion in 1946. On the basis of the greater supply of building materials currently being produced and the higher level of employment in the machinery industry, a further gain in this total can be expected in 1947.

Two notes of warning should be added to this generally favourable picture. A surplus of \$87 million in January brought the total surplus on current account for the Dominion Government to \$378 million for the ten months since the first of April. Since this is equal to 44 per cent of the total advances to foreign countries it means in effect that a substantial part of our foreign loans is being financed from current receipts. duced tax rates now in force and an expected decline in receipts from the sale of war assets will cause revenues to fall off but this may be more than offset by the fall in expenditures. Whether or not the government surplus will become large enough to have a dampening effect on total expenditures will be a matter for careful observation. A similar dampening effect might occur if improved productivity and higher industrial prices diverted a larger share of the income stream into corporate profits.

Evidence from a survey of the number of hogs on farms at December 1, 1946 indicates that Canada's hog production is again increasing, reversing the downward trend that commenced in early 1944. Continued declines in the number of hogs on farms in Western Canada were more than offset by sharp increases in the East which raised the total population

the tion by 2 per cent from its level a year ago. Though the rate of decline on the Prairies is slowing up, a further decrease there of over 5 per cent during the six months following the summer was indicated by an estimate of the number of sows bred to farrow. The subsequent announcement of higher prices on bacon hogs may result in some reduction in the decline anticipated in the Prairies at the time of the survey and in further increases in the East. A considerable further gain is required if the objective of a 20 per cent increase in marketings, considered necessary to fulfil the export contract with the United Kingdom, is to be fulfilled.

Publication of the report of the Royal Commission on the coal industry and the strike of coal miners in the Maritimes have drawn attention to Canada's coal supply. In the report the commissioners, while recognizing that Canada must still depend on imports for a large part of her coal, recommended continued support for the coal industry in the form of transportation subventions and production subsidies together with the retention of the present tariff on imports. Canada's increasing dependence on imports of coal is reflected in the fact that in 1946 they supplied 62 per cent of her total supply, as compared with 47 per cent in 1939. A seven per cent increase occurred in domestic production during 1946 and the total for the year amounted to 17.7 million tons, of which 5.8 millions was in the Maritimes and 11.9 millions in Western Canada. Notwithstanding this gain, production was still below the level reached in 1942 and 1943. Demands for higher wages in the Maritime coal mines have followed recent increases granted in Alberta. At the first of December average hourly earnings of Alberta miners were \$1.22 compared with an average of 91 cents an hour in Nova Scotia.

A slight decline in the cost of living index occurred at the first of January due to seasonal declines in the prices of eggs and citrus fruits. This was an exception to a picture of further price advances. Industrial material prices advanced sharply in January due to higher prices for non-ferrous metals and the general index of wholesale prices moved up from 111.8 to 114.1. Still further price increases are promised as a result of the partial removal of subsidies on raw cotton and cotton yarns, and on oils and fats.

Construction contracts awarded reached the highest dollar level on record during 1946 and in terms of real volume, estimated by adjusting for the change in construction costs, they were second only to 1929. This higher volume of construction is a major difference between the present period and the temporary boom following the end of World War I. One other difference between then and now lies in the nature of construction costs. Though construction costs in 1946 were about the same level as in 1920 wage rates at that time were substantially lower whereas building material prices were much higher. Because of the greater inflexibility usually associated with wage rates, a sharp fall in construction costs such as occurred in 1921 seems less likely today. Indexes of costs are, of course, by no means identical with the cost of a finished house or factory to the buyer for they do not include contractors' profits or variation in worker productivity on the construction job. A more plentiful supply of building materials should lead to gains in worker productivity and may also cause some reduction in the contractor's margin, leading to lower costs which will not be reflected in present indexes.

SITUATION ÉCONOMIQUE EN JANVIER

Les estimations provisoires des dépenses nationales brutes et de la production nationale brute donnent un exposé sommaire utile de l'activité économique en 1946. En comparaison de 1945, ces totaux déclinent légèrement de \$11,500,000,000 à \$11,100,-000,000 et le revenu national brut diminue, d'un montant analogue, soit de \$9,600,000,000 à \$9,200,000,000. Bien que le changement soit léger, de brusques déplacements se produisent dans le cas de certains composants. Sous la rubrique des dépenses dans les comptes nationaux, une réduction de \$1,800,000,000 des dépenses du gouvernement est contre-balancée en grande partie par une augmentation des dépenses des consommateurs et par les avances dans les placements des particuliers dans la machinerie, l'outillage, les logements et les stocks. Quant au revenu, le passage de l'économie de guerre à celle de paix se reflète dans une réduction de \$800,000,-000 des soldes et des allocations militaires, laquelle est partiellement contrebalancée par l'augmentation des recettes de l'entreprise privée (y compris l'agriculture) et par la hausse des salaires et des gages civils.

0886

7 6 3

Un total important, celui des paiements de revenu personnel, augmente de \$400,000,000 comparativement à 1945 pour toucher un sommet sans précédent de \$9,200,000,000. Cette augmentation découle principalement de l'augmentation de \$600,000,000 signalée dans les paiements de transfert, dont les plus importants sont les versements de gratifications de guerre. de crédits de rétablissement et de pensions. L'augmentation des allocations familiales, qui n'avaient été versées que durant la moitié de 1945, est un autre facteur en cause. Ces augmentations considérables du revenu dépensable des anciens combattants aident à maintenir les paiements de revenu au moment où la solde militaire décline et le chômage dû à la reconversion cause une certaine diminution dans les bordereaux de paie des industries. De cette façon, elles contribuent sensiblement à la hausse des dépenses du consommateur et des prix de détail.

Une portion considérable de ces paiements est financée à même la taxation courante, car le fédéral accuse un excédent de revenu ordinaire sur les dépenses courantes durant l'année financière actuelle. Même en ce cas, le transfert de fonds des contribuables aux bénéficiaires des gratifications de guerre a pu stimuler les dépenses, si les personnes qui ont reçu ces versements les ont dépensés plus libéralement que ne l'auraient fait les personnes recevant ces versements sous forme de dégrèvements.

En 1947, ces paiements de transfert vont décliner sensiblement par rapport au niveau touché en 1946, mais sans nécessairement causer une déflation. Sur une base mensuelle, il se produit depuis quelque temps une diminution des paiements aux anciens combattants qui est contre-balancée par la récente augmentation de la feuille de paie industrielle et par l'abaissement de l'impôt sur le revenu mis en vigueur au début de l'année. Le 1er décembre, les feuilles de paie globales de huit industries sont de 14 p.c. plus élevées qu'à la même date il y a un an et de 12 p.c. au-dessus de leur niveau moyen de 1946. Jusqu'à présent, rien n'indique que le déclin courant des paiements de transferts amortisse les dépenses personnelles. Les ventes de détail en décembre demeurent fortes, bien que les ventes de gros enregistrent une baisse saisonnière plutôt brusque en novembre et décembre.

Les dépenses globales de consommateurs en 1946 sont d'environ 8 p.c. plus élevées qu'en 1945, gain quelque peu moindre que l'augmentation de 14 p.c., enregistrée par l'indice général des ventes de détail. Cette différence s'explique du fait qu'une des parties composantes du total, les allocations pour l'achat de vivres et de vêtements par les forces armées, décline et que les dépenses pour des services non compris dans l'indice des ventes aug-

mentent moins sensiblement. Les dépenses pour des denrées durables de consommateur augmentent brusquement en 1946 et, sauf dans le cas des automobiles, les consommateurs dépensent une portion aussi élevée de leur revenu (après déduction d'impôt) pour ces item qu'avant la guerre. Les ventes d'autos de tourisme devraient augmenter de nouveau sensiblement en 1947, mais le niveau des ventes sera encore restreint par le volume de production. Cette augmentation, ajoutée à de nouvelles augmentations de dépenses pour d'autres articles durables, peut amener un nouveau déclin des épargnes et un recours plus général au crédit à tempérament. Si les consommateurs résistent de facon déterminée à la hausse des prix en retardant leurs dépenses en prévision d'une baisse, les rentes ralentiront peut-être. Cependant, il y a peu d'indices d'un tel mouvement

jusqu'à présent.

En outre de l'augmentation des dépenses des consommateurs, l'avance des placements des particuliers et le maintien des exportations à un niveau élevé sont des facteurs importants qui servent de contrepoids au déclin des dépenses du gouvernement. Au cours de l'année, les exportations sont sou-tenues par le programme fédéral de prêts au Royaume-Uni et à d'autres pays. Bien que ces prêts puissent soutenir les exportations durant au moins une partie de 1947, ils ne sont qu'une aide temporaire sur laquelle on ne peut compter pour une plus longue période. Afin de garder les exportations à ce niveau élevé sans l'aide de prêts, il faudra augmenter de nouveau les importations pour fournir les fonds nécessaires à leur financement. La reprise de la production en Europe et au Royaume-Uni pourrait avec le temps pourvoir notre commerce d'exportation de denrées requises pour qu'il suffise à ses besoins, mais l'absorption de cet approvisionnement accru de marchandises importées dans l'économie canadienne exigerait une augmentation des dépenses de consommateurs ou des placements particuliers ou des deux à la fois. qu'il ne soit pas indu de s'attendre à quelque expansion de ces deux item,

il v a danger que cette transition occasionne un déclin de la production. Le tout dépendra de la rapidité avec laquelle seront dépensés les prêts et de la fermeté des autres formes de dépenses. Jusqu'à la fin de janvier 1947. les avances aux autres pays qui ont reçu des prêts s'élèvent à \$850,-000, soit un peu de 40 p.c. du total autorisé. Bien que ces avances dépassent les dépenses véritables, elles donnent une indication du rythme auquel ces prêts sont utilisés. Les dépenses en placements sous forme de construction de logements et de locaux d'affaires, de nouvelles fabriques et d'outillage augmentent de \$823,000,-000 en 1945 à \$1,100,000,000 en 1946. En raison de la production actuelle plus abondante de matériaux de construction et du niveau plus élevé de l'emploiement dans l'industrie de la machinerie, une nouvelle avance de ce total est prévue en 1947.

Il serait bon d'ajouter deux avertissements à ce tableau généralement encourageant. Un excédent de \$87, 000,000 en janvier porte l'excédent total du compte courant du gouvernement fédéral à \$378,000,000 durant les dix mois, à compter du ler avril. Etant donné que ce chiffre équivaut à 44 p.c. des avances totales aux pays étrangers, il en résulte qu'une partie considérable de nos prêts à l'étranger sont financés à même les recettes courantes. Les impôts moins élevés actuellement en vigueur et un déclin prévu des recettes provenant de la vente des biens de guerre entraîneront une baisse de revenus qui, cependant, sera peut-être plus que contre-balancée par la diminution des dépenses. Un sujet d'observation sérieux sera de savoir si le surplus du gouvernement deviendra suffisamment élevé pour amortir les dépenses totales. Il peut se produire un amortissement analogue si une meilleure productivité des prix industriels plus élevés détournent une plus forte proportion du revenu en faveur des profits des corporations.

Le relevé du nombre de porcs sur les fermes, le 1er décembre 1946, révèle que la production canadienne de porcs augmente de nouveau, renversant ainsi la tendance à la baisse commencée au début de 1944. Le déclin persistant t

du nombre de porcs sur les fermes de de 91 cents l'heure en Nouvelle-Ecosse. l'Ouest canadien est plus que contrebalancé par les brusques augmentations dans l'Est, qui portent le nombre à 2 p.c. au-dessus de celui d'il y a un an. Bien que le déclin dans les Prairies ralentisse, il se produit une nouvelle diminution de plus de 5 p.c. durant les six mois qui ont suivi l'été, d'après une estimation du nombre de truies devant mettre bas. La mise en vigueur subséquente de prix plus élevés pour porcs à bacon peut ralentir le déclin prévu dans les Prairies au moment du relevé et une nouvelle augmentation dans l'Est. Pour qu'une augmentation de 20 p.c. soit obtenue dans l'écoulement, afin de pouvoir remplir le contrat d'exportation avec le Royaume-Uni, il faudra que de nouveau la production augmente considérablement.

La publication du rapport de la Commission royale sur l'industrie du charbon et la grève des mineurs de charbon dans les Maritimes attire l'attention sur les approvisionnements de charbon au Canada. Dans ce rapport, les commissaires, qui reconnaissent que le Canada doit continuer de compter sur l'importation pour une grande partie de son charbon, recommandent une aide permanente à l'industrie du charbon sous forme de subventions au transport et de primes de production, tout en retenant le tarif actuel sur les importations. fait que les importations de charbon ont contribué 62 p.c. des approvisionnnements totaux en 1946, en comparaison de 47 p.c. en 1939, indique que le Canada compte de plus en plus sur elles. La production domestique augmente de 7 p.c. en 1946 et le total de l'année atteint 17,700,000 tonnes, dont 5,800,-000 proviennent des Maritimes et 11,900,000 de l'Ouest canadien. En dépit de cette augmentation la production demeure au-dessous du niveau de 1942 et 1943. Les réclamations de gages plus élevés dans les mines de charbon des Maritimes suivent les augmentations récentes accordées en Alberta. Au 1er décembre, le gain horaire moyen des mineurs de l'Alberta est de \$1.22 contre une moyenne

Il se produit un léger déclin de l'indice du coût de la vie au ler janvier, causé par les diminutions saisonnières du prix des oeufs et des agrumes. C'est là une exception au renchérissement général. Les prix des matières premières industrielles augmentent brusquement en janvier, à cause du renchérissement des métaux non ferreux; l'indice général des prix de gros augmente de 111.8 à 114.1. Un nouveau renchérissement est prévu en raison de la révocation partielle des subventions sur le coton brut, les filés de coton, les huiles et les graisses.

Les contrats de construction accordés atteignent le niveau en dollars le plus élevé jusqu'à présent en 1946 et, en terme de volume réel, calculé en tenant compte des fluctuations du coût de la construction, ne cèdent le pas qu'à Ce volume accru de construction établit une différence importante entre la période actuelle et le boom qui a suivi la première Grande Guerre. Une autre différence entre les deux périodes consiste dans la nature du coût de la construction. Bien que les frais de construction en 1946 soient à peu près au même niveau qu'en 1920, les taux de gages étaient alors sensiblement moins élevés tandis que les prix des matériaux étaient beaucoup plus hauts. En raison de l'inflexibilité plus grande qui s'associe habituellement aux taux des gages, une dégringolade brusque comme celle de 1921 semble moins probable de nos jours. Evidemment, les indices du coût ne sont aucunement identiques à ce qu'il en coûtera à l'acheteur pour une maison ou pour une usine une fois celles-ci terminées, car ils ne comprennent pas les profits de l'entrepreneur ou la variation du rendement d'un ouvrier au travail de construction. Une plus grande abondance de matériaux de construction devrait entraîner des augmentations du rendement ouvrier et pourrait aussi diminuer le profit de l'entrepreneur, d'où une réduction du coût qui ne serait pas reflétée dans les indices courants.

BUREAU FÉDÉRAL DE LA STATISTIQUE, le 28 février 1947. 82318-2
